(57) ABSTRACT

A method, computer program and apparatus operate when resuming data transmission/reception upon activation of a serving cell, or after a long in-device coexistence interference avoidance gap, to determine whether to report to a network access node an in-device coexistence interference indicator value and send the in-device coexistence interference indicator value to the network access node. The in-device coexistence interference indicator value is reported to the network access node for a certain period if any periodic channel quality indication resource is configured for the cell, or if an aperiodic channel quality indication for the cell is requested from the network access node.

Related U.S. Application Data

- (63) Continuation of application No. 14/618,297, filed on Feb. 10, 2015, now Pat. No. 9,401,796, which is a continuation of application No. 13/344,711, filed on Jan. 6, 2012, now Pat. No. 9,007,933.
- (60) Provisional application No. 61/430,594, filed on Jan. 7, 2011.
